## Laboratory Activity 2: Greeting Program

The screenshot displays a Windows desktop environment during a laboratory activity. On the left, a Google Chrome browser window shows the GitHub repository for 'greet.js'. In the center, two code editors are open. The top editor, titled 'greet.js', contains the following JavaScript code:

```
function greet(name) {  
  return "Hello, " + name;  
}  
  
module.exports = greet;
```

The bottom editor, titled 'callGreet.js', contains the following JavaScript code:

```
const greet = require('./greet');  
console.log(greet("CKYG"));  
console.log(greet("Yung Stunna"));
```

On the right, a Windows Command Prompt window shows the execution of the program. The commands and their outputs are as follows:

```
C:\Users\SOC>E  
'E' is not recognized as an internal or external command,  
operable program or batch file.  
  
C:\Users\SOC>E:  
  
E:\>mkdir myGreetings  
  
E:\>cd myGreetings  
  
E:\myGreetings>notepad greet.js  
  
E:\myGreetings>notepad callGreet.js  
  
E:\myGreetings>node callGreet.js  
Hello, CKYG  
Hello, Yung Stunna  
  
E:\myGreetings>
```

The Windows taskbar at the bottom shows the search bar, task view button, and several application icons. The system tray on the right indicates the language is ENG US, and the date and time are 11:31 AM on 01/07/2025.
